Introduction

Introducing EAZYTRIP, a sophisticated app designed to revolutionize ride and delivery services. EAZYTRIP creates a seamless interaction between admins, users, and riders. Admins efficiently manage and optimize a custom-made map, ensuring precise routing. Users can effortlessly request rides or deliveries, benefiting from accurate cost and shortest distance calculations, enabled by our optimized code. Riders promptly fulfill these requests, enhancing overall convenience and reducing travel times.

Users of EazyTrip

Admin

Admins manage the backbone of EAZYTRIP by creating and optimizing a custom map. They add and connect various locations, ensuring accurate routing for users and riders. This efficient map management enables precise shortest distance calculations and cost estimates, enhancing the overall functionality and reliability of the app.

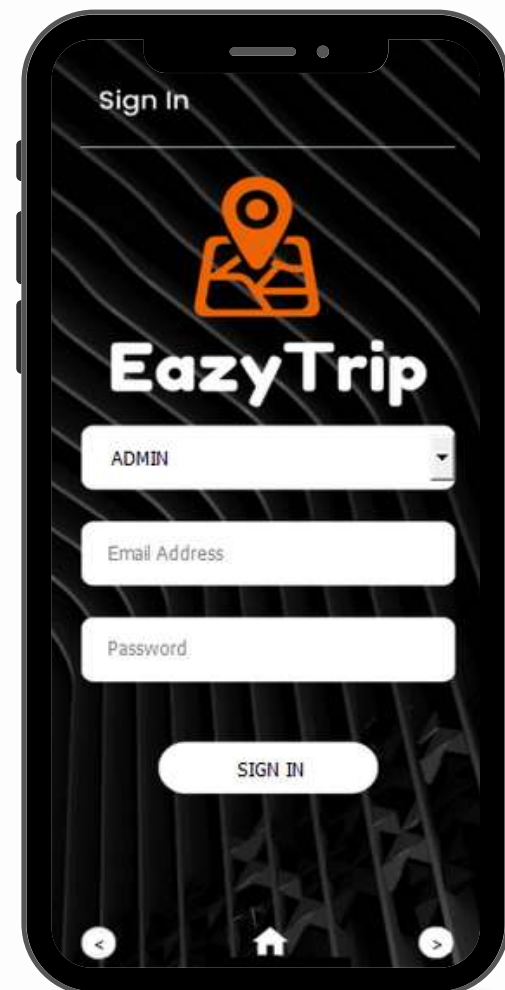

Customers Panel

Account Management:

Sign Up and Sign In:

Customers can create an account and log in securely.

Profile and History

Customers can view and update their profile information and access their ride and delivery request history.

Customers Panel

Service Requests

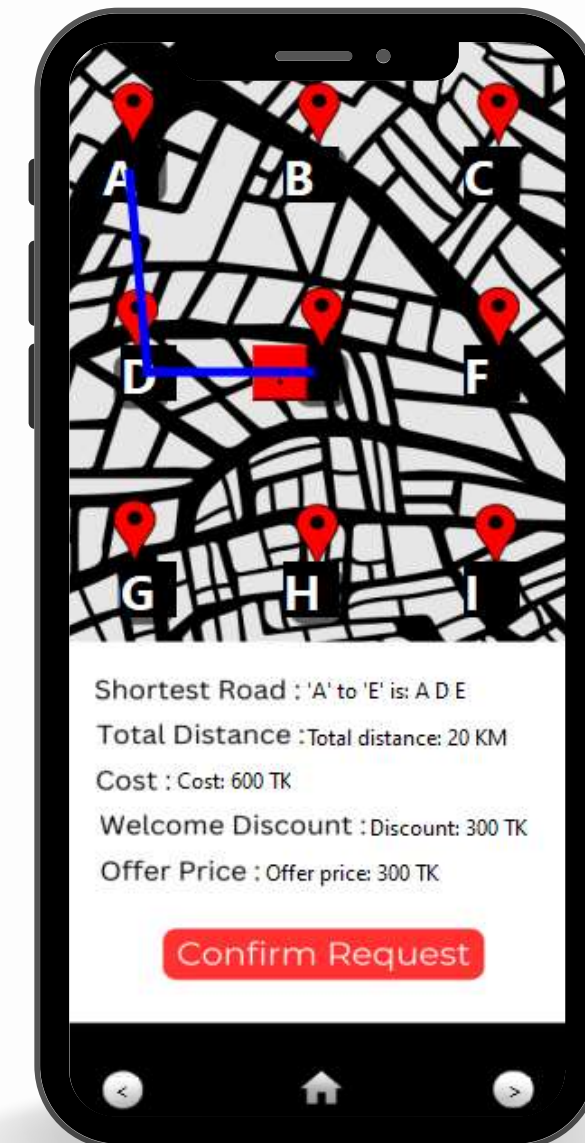

Ride Order:

Customers can request rides from one location to another.

Parcel Delivery:

Customers can request the delivery of parcels from one location to another.

Customers Panel

Interaction

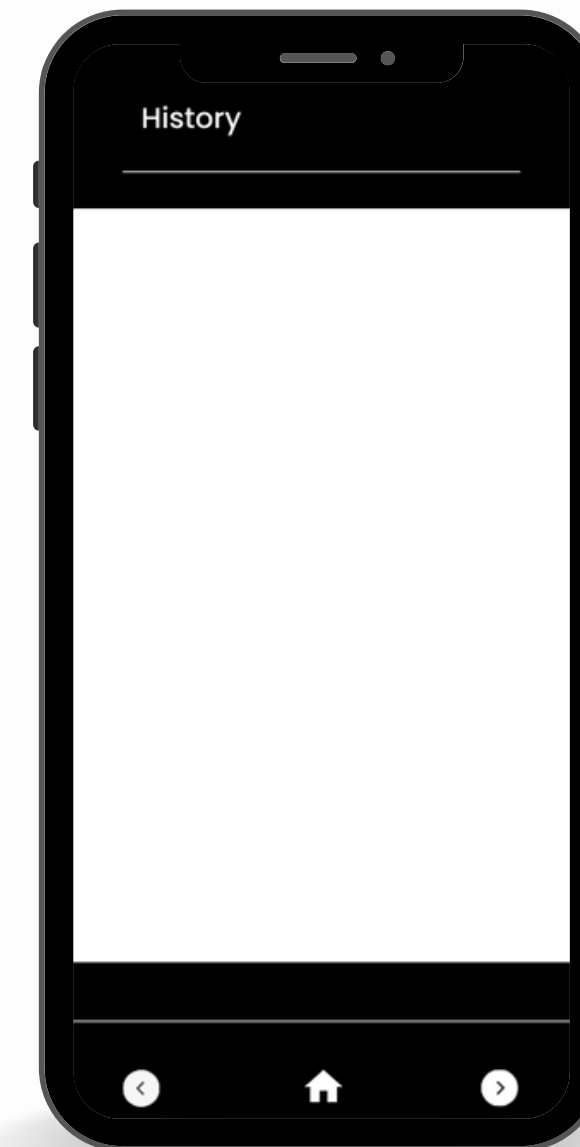

View Order Status

Customers can track the status of their ride and delivery requests.

Provide Feedback

Customers can provide feedback on their experience with the service.

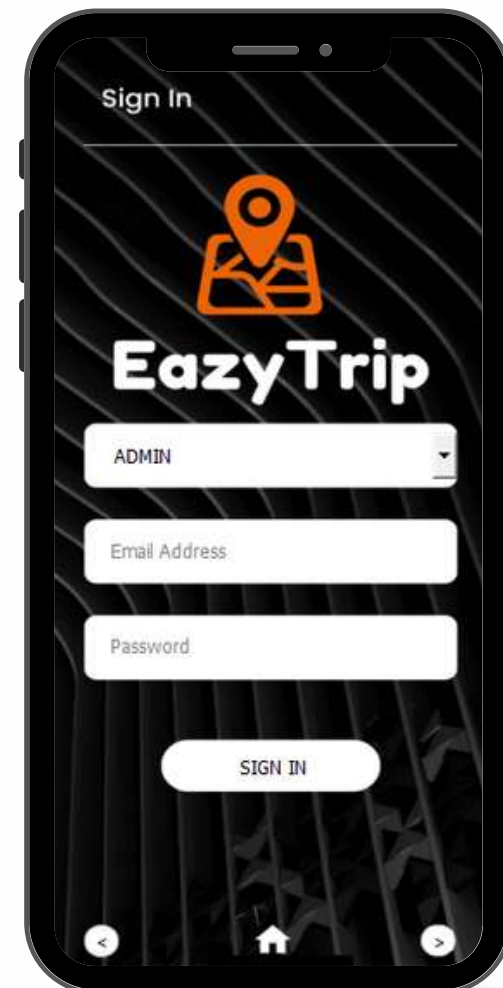

Rider Panel

Account Management:

Sign Up and Sign In:

Riders can create an account and log in securely.

Profile and History

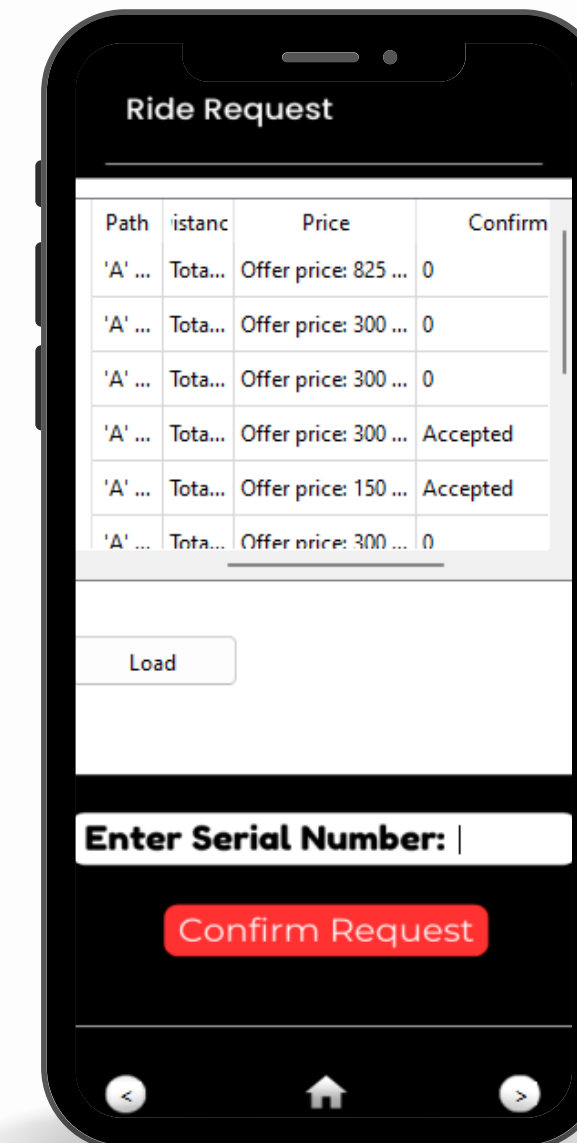

Riders can Access history of accepted requests.

Rider Panel

- Riders can see pending ride and delivery requests from Customers.
- Riders can accept requests they wish to fulfill.

Rider Panel

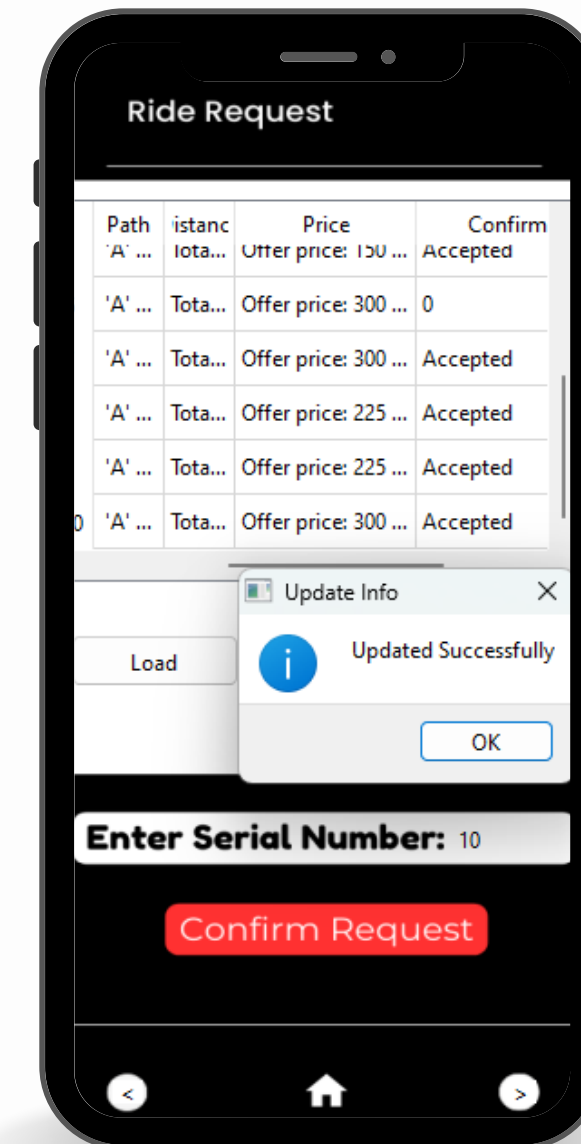

Interaction

Update Order Status:

Riders update the status of accepted requests, providing real-time updates to Customers.

View Feedback

Riders can view feedback provided by Customers on completed requests.

Features

Custom Map

EAZYTRIP features a customizable map for precise route management. Administrators can define accurate connections between locations, ensuring efficient routing for ride and delivery requests, enhancing reliability and user satisfaction.

Shortest Road

EAZYTRIP employs advanced algorithms to calculate the shortest routes between locations in real-time. This feature ensures efficient travel and delivery times, optimizing user experience and operational efficiency.

Cost Saving

EAZYTRIP saves costs for customers by calculating the shortest distance between locations. This optimization reduces travel expenses and enhances affordability while maintaining efficient service delivery.
